

New (2023) Huawei H13-531_V2.0 Exam Dumps [Q118-Q135]

New (2023) Huawei H13-531_V2.0 Exam Dumps

Best Way To Study For Huawei H13-531_V2.0 Exam Brilliant H13-531_V2.0 Exam Questions PDF

QUESTION 118

Which component does the license server interact with to manage the license?

- * WI
- * HDC
- * ITA
- * TCM

QUESTION 119

When using Rainbow for virtual machine migration, winSrcAgent will automatically identify the operating system type of the source virtual machine (judgment new)

- * TRUE
- * FLASE

QUESTION 120

(Multiple choice) If FusionCompute virtual machine A were able to ping virtual machine B, which of the following results can be inferred from this?

- * virtual machine A and virtual machine B are configured with the same IP address
- * virtual machine A and virtual machine B run on the same physical machine
- * virtual machine A and virtual machine B use the same network segment
- * virtual machine A and virtual machine B use different network segments

QUESTION 121

Which of the following scenarios is not applicable to FusionCompute snapshots? (single choice)

- * business patch upgrade
- * Business Destruction Test
- * long-term preservation of business data
- * Major business changes

QUESTION 122

A user needs to redeploy a set of Huawei private cloud. The following are the installation steps for FusionCloud. Which item is in the correct order? (one) a. The FusionCloud Deploy node network port communicates with the execution machine; b. The execution machine installs FusionCloud Deploy by mounting the ISO image; c. Automatically install the basic management node; d. Release the FusionCloud Deploy node to the KVM computing node pool; e. Automated installation of KVM compute nodes;

f. The network port of the FusionCloud Deploy node communicates with the environment to be deployed; g. The executor uploads the software package to the FusionCloud Deploy node; h. Automated installation of extended management nodes.

- * a-f-h-c-g-b-e-d
- * a-f-b-g-c-h-e-d
- * a-f-c-b-g-h-e-d
- * a-f-h-b-g-c-e-d

QUESTION 123

In Huawei's disaster recovery solution, what technology does the system use to implement host replication disaster recovery?

- * IO Mirror
- * Hyper Mirror
- * Hyper Replication
- * IO Replication

QUESTION 124

In the Region Type III scenario of FusionCloud, which of the following nodes are required? (Multiple choice)

- * Storage Node
- * KVM compute node
- * Control Node
- * Network Nodes

QUESTION 125

Regarding the description of the functions of each module of FusionSphere OpenStack, which of the following is incorrect?

- * LOG: Provides log management function, supports log level setting and log dump
- * CPS: Provides the function of installing OS by PXE in cloud data center
- * Backup: Provides management data backup and recovery functions, and supports regular automatic backup of management data
- * HealthCheck: Provides health check and related information collection functions

QUESTION 126

The administrator creates cluster A and cluster B on Fusioncompute, and each cluster includes 10 objects.

The HA function is enabled for cluster A, and the dynamic resource scheduling function is enabled for cluster B.

Existing Portal Stations and OA systems need to be deployed as follows:

1. There will be no resource preemption or mutual interference between the portal website and the OA system;
2. The portal server can automatically shut down redundant servers when the business is at a low point;
3. The OA system server needs to ensure that the failure of a single host can be recovered in time.

Which of the following is the best way to deploy a business system? (one)

- * Portal and OA systems are deployed in cluster B
- * The portal website is deployed in cluster A, and the OA system is deployed in cluster B
- * The OA system is deployed in cluster A, and the portal website is deployed in cluster B
- * Portal and OA systems are deployed in cluster A

QUESTION 127

Which of the following options is incorrect about the description of FusionAccess to quickly distribute virtual desktops?

- * The system disk capacity set when creating a virtual machine cannot exceed the remaining capacity of the data storage.
- * For linked clone type virtual machines, it is recommended to use high-performance storage for the system disk.
- * When the desktop group type is static pool, the name of the desktop virtual machine displayed on the WI is the name defined by the virtual machine naming specification.
- * When the desktop group type is dedicated, the name of the desktop virtual machine displayed on the WI is the name defined by the virtual machine naming specification.

QUESTION 128

(multiple choice) inFusionSphereIn the private cloud solution, which of the following functions can be implemented when a tenant (non-tenant administrator) applies for the cloud server backup service?

- * Perform backup tasks automatically or manually
- * Modify Backup Capacity Quota
- * Configure backup strategy or recovery strategy according to actual needs
- * Self-modified service period

QUESTION 129

FusionComputeThe host fails to add data storage. Which of the following are possible causes of the failure?

- * add one for the first timeLUNFormat is not selected when storing for virtualized data
- * The host cannot access the storage

- * Host management network exception
- * The datastore mount directory is occupied

QUESTION 130

(Multiple choice) In configuration FusionSphere OpenStack, can be used to achieve RabbitMQ and FusionCompute. What are the connected network planes?

- * Internal Base
- * External_Base
- * External OM
- * External_API

QUESTION 131

In Huawei's disaster recovery solution, which of the following is correct about the description of VRG?

- * After creating and configuring the VRG, create a snapshot for it immediately to prevent unavailability caused by mis-operation
- * When a VRG cannot meet the load requirements, a new VRG needs to be added. The newly added VRG cannot be created by cloning, but can only be deployed by template
- * When using storage replication for disaster recovery, VRG needs to be deployed on FusionCompute
- * When using the host replication disaster recovery method, only the virtual machine on the CAN host where VRG is deployed can be protected

QUESTION 132

The cloud architecture of Huawei FusionAccess desktop is a _____ architecture, and the computing and data of this architecture are in the cloud.

It has the characteristics of centralized management, centralized operation, high data security, simple terminal maintenance, and high system reliability.

(Please fill in the English abbreviation).

- * VDI
- * VPO

QUESTION 133

(True or False) ManageOne In the operation plane, if the parent VDC Quotas are limited (e.g. 100 individual vCPU, 320GB memory), the child VDC Support is set to unlimited quota.

- * True
- * False

QUESTION 134

FusionCloud It can be connected to HUAWEI CLOUD through cloud federation, so that users can easily use the richer cloud services of HUAWEI Public Cloud.

- * correct
- * False

QUESTION 135

In fusioncompute, after the virtual machine is assigned to a specific host, some of the following functions are affected?

- * DPM
- * HA
- * DRS
- * reboot
